Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-11, drawn to a sensor for sensing precursor seismic activity, classified in class 324, subclass 344.
- II. Claims 12-15, drawn to a method of detecting precursor seismic activity, classified in class 324, subclass 344.
- III. Claims 16 and 17, drawn to a method of detecting a fault using a moving sensor, classified in class 324, subclass 330.
- IV. Claims 18-20, drawn to a method of determining the general latitude of a fault, classified in class 324, subclass 323.

Inventions II, III, IV and invention I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed could be used to practice any individual ones of the methods of Groups II, III and IV, or be used to detect electromagnetic phenomena unrelated to precursor seismic activity. In addition, the methods of Groups II, III and IV are distinct from each other since they involve different inventive concepts embodied in different method steps, for achieving different purposes. Thus, the method of Group II does not require the moving sensor of Group III or the association of a signal frequency component for determining latitude of a fault required by Group

Application/Control Number: 09/941,391

Art Unit: 2862

IV. Nor do the methods of Groups III and IV require the imposition of, and sensing of, a signal

across a conductive material for detecting precursor seismic activity as required by Group II.

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art because of their recognized divergent subject matter, restriction for

examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

Any inquiry concerning this communication should be directed to G. R. Strecker at

telephone number (703) 305-4937.
